

FOR IMMEDIATE RELEASE

OATUG-Hosted Partner Webinar:

How Agentic AI Transforms AP in Oracle EBS

TAMPA, Fla. (April 2026) - IntelliChief is proud to present our webinar, [How Agentic AI Transforms AP in Oracle EBS](#), on June 24, 2026, hosted by the Oracle Application's & Technology User Group (OATUG). Our webinar highlights how agentic AI revolutionizes environments for [EBS AP automation](#).

Oracle EBS users have relied on manual data entry or older technologies like traditional OCR to lift data from invoices only to find their teams still bogged down by manual validation, rigid matching rules, and the manual spreadsheet exercises required to track outstanding liabilities at month-end. True transformation requires a unified framework that leverages agentic AI to orchestrate a seamless workflow from intelligent capture to strategic financial control.

Join us to discover how agentic AI and intelligent document processing are revolutionizing accounts payable within Oracle EBS environments. We will explore how intelligent capture eliminates rigid templates to ingest data, and how intelligent matching executes autonomous two-way and three-way matching directly against live Oracle PO and receipt tables. And we will dive into how flexible configuration for accruals recognition gives finance teams real-time visibility into liabilities, transforming the month-end close from a reactive exercise into an automated, predictable process. Learn how to drastically lower processing costs and optimize your ledger - all while preserving your core ERP configurations.

In this webinar, you'll learn how:

- Identify and eliminate the manual gaps left by traditional, template-based OCR and manual data entry by leveraging intelligent capture to accurately ingest unstructured invoice data.
- Maximize straight-through invoice processing by utilizing autonomous two-way and three-way matching directly against live Oracle EBS purchase order and receipt tables
- Streamline the month-end close cycle using flexible configurations for accruals and recognition that provide real-time visibility into outstanding liabilities without manual spreadsheet tracking.

About IntelliChief

IntelliChief provides a software platform for AI-enabled automation that integrates with enterprise-class ERP systems to eliminate administrative errors and streamline operations for accounts payable, accounts receivable, sales order management, human resources and more. By robotically capturing, validating, entering and processing data directly into an ERP, IntelliChief enables companies to reengineer mission-critical business processes and reduce costs.
